

Global-Freelancing-Data

Data Visualization - Dashboard

Project Overview

This Freelancer Dataset Project focuses on Exploring, Cleaning, and analyzing data related to freelancers from different countries their skills, project and client ratings. This Project aims to uncover meaningful insights that can help freelancers and client marketplace platforms make better decisions.

Objective Dataset Description

The main goal of the project is to understand performance ratings with skill trends in freelance platforms by analyzing factors such as:

Freelancer ID, Name, Country, Skills, No. of projects, Duration etc.,

Key Analytical Insights

- Relation between Skills, ratings and earnings per hour in USD
- Client satisfaction and No. of projects with duration
- Gender and count analysis

Key Tools and Features

- Data Modeling and Cleaning
- Using conditions to fill blank values
- Handling missing values and Standardizing categories
- Outlier detection, Conditional Formatting and Databars
- Advanced Visualization Techniques like Charts, Pivot table and Analysis Toolpak
- Slicers, filters and Dynamic calculations
- Dashboard Creation

Conclusion

The analysis of the freelancer Dataset provides valuable insights through data exploration and visualization. Visual Dashboard further revealed geographic distributions, variations in hourly rates and relationships between skills, experience and client ratings.
